

FormsPro has many different features to fit your business needs. Helping to foster efficiency, these are some of the most popular features to help transform your forms to work better for your business.

## Conditional Logic:

Ability to show additional fields in FormsPro based on the answer to another input on a form. This also allows consolidating multiple forms into a single form. Conditions also can drive emails and reports, workflow processes and data integrations.

## Connected Data/ Data Maps:

Process of connecting a data field from one source to a data field in another source. Pre-populate forms for more efficient completion of service.

## Calculated Fields:

Used to calculate simple to complex numeric entries on a form. Automatically calculate chosen fields for easy viewing on forms and reports.

## Dynamic Tables:

A table that allows for multiple and different inputs across a row. The mobile user can dynamically add rows to record as many readings as necessary for data capture.

## Repeatable Groups:

A "container" on a form that you can drag and drop inputs into to create a group of information that repeats on the app.

## Data Sets:

Data sets are data from applications or queries that are pulled onto a form, and can be filtered to specific data related to previous entries, such as the user or a work order number.

## Reusable Sections:

Sections speed up the form building and editing process allowing a group of pre-set fields applied to a single or multiple forms.

## Site to Site Deployment:

Use Form Deployment to deploy forms, and all associated components, to different environments. Easily test forms in a test environment and deploy to a production environment.

## Media Fields:

Capture photos, video, or audio on forms. Media is for immediate access to digital assets upon submission.

## Signature Capture:

Technicians & Customers can sign forms as required for job safety, completion of service, payment, and more. Text, QR Code or email can be used for "Contactless Signature" when a person is not on site.

## Reports

Easy-to-read reports are automatically generated once a form is submitted. FormsPro includes a Report Builder to create single or multiple custom reports for customers, internal users, agencies and more.

## Logos

Put logos on forms to take control and make them your own with customizable branding.
